

LiquidGalaxy.Eu ideas

This is my ideas for sections on liquidgalaxy.eu website. Sections are centralized on building and communication community.

Ideas:

- Gallery

Gallery for photos from projects, initiatives, and events and some others places where liquid galaxy was sawed. Photos would be categorized by folders. One folder for one event.

Technology to use: [juicebox](#)

- Posts

- Users posts

I think about posts like normal posts but created by users. Posts with content about events, users projects or something that is more “important” then post on a forum. All posts from users must be confirmed by liquid galaxy.

Technology to use: probably built in cms

- Org posts

Normal posts wrote by liquid galaxy lab.

Technology to use: built in cms

- Calendar

Calendar with events where liquid galaxy takes practice or someone can see liquid galaxy.

Technology to use: [google calendar](#)

- About us

- FAQ

Most popular questions and answers.

Technology to use: static page

- Link

Section with helpful links like wiki, repo, some videos and more.

Technology to use: static page

- Projects

Section with list of liquid galaxy projects like hapis and dronecoria.

Technology to use: static page

- Chat

One chat available for everyone. Will be can ask for anything fast and simple. Ask for something small, about some trifle.

Technology to use: tlk.io

Implementing tlk.io is so easy. Only what you need is add few linse of code to html. User will only enter nick and he can connect with chat.

```
<div id="tlkio" data-channel="liquid_galaxy_eu" style="width:100%;height:400px;"></div><script async src="http://tlk.io/embed.js" type="text/javascript"></script>
```

For more implementations options go to <https://tlk.io/#embed>

Extra:

- Discord

Create a discord server for liquid galaxy community. Some of people use them and that is maybe good idea.

- Forum

I think to create a mini forum is a good idea. Users will be can new threads and posting. They will post some errors, his ideas to integrate something with liquid galaxy. The forum will be available on link <http://forum.liquidgalaxy.eu>

Technology to use: [phpBB](#)

Requirements for server ([docs](#)):

- php version 5.4.7+
- database (one from this list: MySQL, MariaDB, MS SQL Server 2000, Oracle, PostgreSQL, SQLite)
- getimagesize() function enabled
- php modules:
 - json
 - xml
 - for db what you pick
- extra php modules for extra cms functions:
 - zlib Compression support
 - Remote FTP support
 - Imagemagick support
 - GD support

Installation:

1. Download [phpBB](#)
2. Decompress archive
3. From browser open url (<http://<domain>/phpBB>)
4. Install phpBB step by step from browser.

After installation forum will be available for anyone. Someone can create profile and add new post :)
