My opinion and ideas

Opinion

It was my first experience with google assistant(as a developer). I'm shocked how simple and powerful creating actions is. After first codelab, it was still confusing for me, but after the second it was grateful. Using Dialog flow is very pleasant. Creating app/actions to google assistant is easy and that is the reason why I think that google assistant will be the best of "mainstream" AI. In the next few years people on 100% create a lot of thing to google assistant.

Ideas for lg

I noticed you have voice controller, but this year you give the task to create cms for the liquid galaxy. Google assistant will be a good feature for the cms.

My next idea is to create an installation instruction for lg. It will be so interesting thing to new users.
