Peruse-A-Rue installation

Installation process

I've:

1. Cloned git repository
2. Installed Nodejs and npm
3. Typed bin/peruse-a-rue

Ok after that I opened chrome browser and typed localhost:8086/display/?master=true

And on second screen, obviously, URL for second screen.

But Street View was in Negative effect. Then I realised by inspecting JS, that there is no API Key.

I opened Google Developer Console and created a project. Enabled Street View API and Geocoding API, and generated API key.

Then I've changed in lg-peruse-a-rue/public/display/js/main.js line 39 to:

```
'async!http://maps.googleapis.com/maps/api/js?key=MYAPIKEY&v=3.exp&sensor=false!callback'
```

And it worked!
